## GO "GREEN" FOR YOUR NEXT PATIO PROJECT!

By: Brad Augustian

We love green! Not just the color green, but the environmental sustainability movement. Every year, more unique products arrive on the market and this year Lizer is excited to introduce you to the most exciting environmentally friendly product we have promoted in years; The VAST Composite Paver.

Stop by and visit our Green Bay Home Builders Expo display at the Resch Center, January 15-18 or call our office for an appointment. We are excited to tell you more about the cost competitiveness (cost to install and cost on the environment) of this outstanding new product.

Unchanged for 7000 years, traditional pavers now have a superior replacement. Manufactured locally and made from 95% recycled tires and plastics, a small 10' x 10' patio will spare 50 tires and 1500 plastic containers from disposal in your local landfill. With the added benefit of being permeable (allowing water to penetrate the soil versus running off), these pavers make your project truly 'green.'

Available in a variety of natural colors, both standard and custom, Vast pavers are not only socially responsible but one of the best looking pavers on the market. The specially designed pavers provide a brilliant, "always wet" look normally only possible through chemical sealers on standard pavers. Because they are slightly smaller in size, they provide the added benefit of old world aesthetics.

Installed in the same fashion as standard pavers your VAST pavers will withstand our winters, snow removal, and vehicular traffic. They resist fading, with an industry leading residential fade warranty of ten years. Add in superior slip resistance and a soft, comfortable walking surface, natural to rubber surfaces, and you will find going 'green' is the right choice for your long term enjoyment.
